

Thought provoking album-release from "Behind The Machine"

Listen to the album: [HERE](#) (link to theorchard.com)

While everyone's been busy writing about broken hearts and broken minds for the last two decades or so, more and more frustration and indignation has build up inside the Danish singer-songwriter and multi-instrumentalist Anders Bau.

Why would nearly all music artists neglect looking at the bigger picture? The crisis of survival for the human race in the broader perspective, and what kind of mindset brought us here?

6 years deeply immersed in his studio, and this album is finally here!

Through 15 songs and interludes, Anders Bau dives right into the core of human existence on planet earth covering different aspects and themes. From climate crisis, global warming and the very definition of intelligence – to what are we going to tell our grandchildren, digital addiction, consumption, ignorance, knowledge and power.

This is no doom-sayer album. It is filled with both hope and perspective – and it is hopefully going to make people think what ever they want to think.

Behind The Machine is the latest solo-project from Danish singer-songwriter and producer Anders Bau. All material on this album has been written, performed, recorded, produced and mixed by Anders Bau in Lovely World Sound Studio.

Genre: Progressive Rock/ Art Pop
